SALISH SOILS

At Salish Soils, we honour the earth by empowering people, while healing lands — collecting, receiving and composting waste resources into high quality organics. We produce natural landscape materials and premium organic soils from a state-of-the-art processing facility and mine reclamation site in Sechelt.

T&R Garden Centre

We are proud to partner with Salish Soils of Sechelt to offer a complete range of soil products especially suited to the Powell River growing environment. Together, we offer these premium gardening mediums:

Salish Soils Potting Mix

A blend of Original Fish Compost, washed-filled sand, crusher dust, peat moss, blood meal, bone meal and lime. The Potting Mix is ideal for all tender seedling needs, and gives young plants a healthy start. Light in texture, this product is ideal for planter and container growing.

On using our soils… *The potting mix is best for containers and seedlings and can be used indoors. You may find Garden Mix a bit heavy for containers so we recommend combining two parts garden mix to one potting mix. And make sure to work the soil really well after the first application to get the maximum benefit.*

Salish Soils Original Fish Compost

Our premium product blends certified organic trout from *Agrimarine Lois Lake* in Powell River and Tla'amin salmon, with forest finds and green waste. It is cured over a three-month period and then double-screened to perfection. This product provides supreme organic growing medium for top-dressing your beds and will feed your soil through fall, winter and spring for a healthy nutrient-rich and weed-free soil.

Salish Soils Garden Mix

Consists of Original Fish Compost (70%) and wash-filled sand. It's prefect for all NEW flower, veggie, and landscaping beds. The mix is the foundation to successful growing as the sand acts to retain/drain moisture. Adding Salish compost in the spring/fall completes the process. Ready to use.

Salish Soils Landscape Mix

Landscape Mix is made up of 50% Original Fish Compost and 50% sand. This ratio is ideal for turf and lawn seeding, as well as trees and shrubs.

NEW! Natural Food Waste Soils

Your food waste turned into compost! Salish Soils combines nitrogen-rich food waste with carbon-rich green waste, composting it into lush compost that's ready for the garden. "It's made of the stuff you're growing in it and has everything your plants require." Use it as-is, without needing any other fertilizer. The process of making these product generates sufficient heat to kill weed seeds and pathogens. It is finished by curing and screening and is now available as: Salish Soils **Natural Compost, Natural Garden Mix,** and **Natural Landscape Mix.**

Salish Soils test results available by request

We also carry **mushroom manure, aged, cedar** and **fir mulches** and a full line of **gardening mediums** and **aggregates** from sand and quarry rock to navijack and rip rap.

Need it delivered? No problem — we can even use our slinger truck to place it exactly where you need it!

Available by the pail, by the yard or truckload!
